

Picasa – fast, free and fun photo sharing from Google

Like most things from Google, Picasa is a doddle to use and it's great fun.

Here are just some of Picasa's features

Easy sharing

- No more emailing photos back and forward to friends and relatives. Just stick them on Picasa and view on your own web album
- You can choose whether to make your photos public or private.
- And you get 1Gb of free storage – that's a lot of photos!

Easy organising

- Picasa automatically finds all the photos on your PC, wherever they are, and will organise them in seconds.

Edit to perfection

- No need to buy expensive software.
- Improve almost any picture with Picasa's one-click fixes for common problems like red-eye, color, and lighting. Or, use tuning and effects to make your best photos look even better.

Easy tagging of people and places

- You can easily add geo-tags to your photos so that you can remember exactly where they're from using Google Maps.
- Picasa's technology helps you automatically organize your photos based on the people in them.
