

Coming Soon - Rapid Server and Rapid Desktop Recovery

The little box of tricks fits in the palm of this man's hand and could save your business!

Loss of your server or desktop computer could cause **massive disruption** to your business.

You could lose access to

- Emails
- Vital files
- Customer contact details
- Your accountancy system.

Whilst you're waiting for repair or replacement your business could grind to a halt with **disruption** to customers **escalating rapidly** as each hour passes.

OK that's enough of the scary stuff! At Lucid we're here to provide solutions not problems.

We're excited to tell you that Rapid Server and Rapid Desktop Recovery will soon be available to our customers.

How does it work?

- Rapid Recovery creates an **automatic full backup** of your system. Not just your files but also the Windows Operating System, your email system, database applications and any other server applications, such as Sage.
- The backup can be **scheduled as often as you like** - hourly or daily.
- The system backup is placed onto one of three external USB hard drives like the one above. These are then taken off site and rotated.
- The data can be **restored** to your server or desktop computer **in minutes**.

Benefits to you

- **Minimal disruption** to your business.
- **Protection** from the severe **knock on effects** of system failure including potential for detrimental effect on cash flow and customer service.
